

## *EuroSpec* at a glance

EuroSpec is a group of European train operating companies **providing harmonised product specifications** for use in train procurement and refurbishment.

The **main target** is to **improve the reliability and quality of trains** by using common and standardised functional and non-functional specification and verification methods.

## The benefits of using EuroSpecs:

- Increase of **reliability** by sharing good practice and experience;
- **Simplification** of the tender process in time and cost as a result of fewer variations in requirements between tenders;
- Standardised products and **cost reduction** due to harmonisation of train operators' requirements.

The partners use the **EuroSpec** specifications as part of their calls for tender.

## EuroSpecs

- Available:
  - Requirements Management – Rules and methods
  - Documentation - Unified structure
